

The Week Sheet

A one page revision timetable for a single week, with a spare slot already printed on every day. Students plan two sessions a day at most, leave the spares empty, and when something gets missed they move it into a spare instead of abandoning the plan and starting again on Monday. One sheet each, nothing to prepare, and what it is really teaching is persistence: a plan that gets repaired on Wednesday is worth more than a tidy one that died on Tuesday.

Before you start. Nobody marks this and nobody collects it in. A revision plan a student knows will be checked becomes a plan written to be checked, and the crossings out are the part that matters. If you want to know how the week went, ask them on the Monday rather than taking the sheet off them.

Print these

Page	What it is
Page 2	The week sheet. One each, for one week.
Page 3	A worked example of a week that did not go to plan. It reads best printed on the back of page 2.
The spreadsheet	The same grid to type into, with the worked example on a second tab. For a student who would rather not write it out.

How it works

Step	What happens
Before	Print page 2 and page 3 back to back, one each, or send the spreadsheet instead. They fill it in on a Monday in form time, or at home on the Sunday.
1	Two things a day at most, and each one has to be something they could finish in a sitting. Not a subject and not a number of hours.
2	Every spare slot stays empty while they are planning. Nothing goes in a spare on the day the sheet is filled in.
3	When a session gets missed, they cross it out and write it into the next spare they have got. The crossing out stays on the sheet.
4	The following Monday they read the bottom three lines before planning again. A day that has lost something two weeks running is a day to put less on.

Worth knowing

- The commonest mistake is a week with no slack in it. Fourteen sessions and no spare looks serious on Monday and is finished by Wednesday, and six that all get done beats it every time.
- A session has to be small enough to finish. “Revise biology” is not a session. “The four questions at the end of the respiration chapter” is.
- This is the sheet from Revision That Survives the Week, which is the hour that teaches the idea behind it. The sheet stands on its own, and it lands harder if the form has had the lesson.

Hand it out on a Monday, and ask on the next one what moved.

The week sheet

Two things a day at most. Leave every spare slot empty when you fill this in, and keep them for whatever gets missed.

WHAT GOT MISSED THIS WEEK

WHERE IT WENT INSTEAD

A SPARE I AM KEEPING FOR NEXT WEEK

Cross things out rather than rubbing them out. When you plan next week you want to be able to see what actually happened in this one.

A week that did not go to plan

One student's sheet at the end of a real week. Two sessions moved, nothing was abandoned, and the last three lines are what makes the next week better.

DAY	ONE THING	A SECOND THING	SPARE SLOT
Monday	Chemistry: the six equations on the cards	English: plan the question 5 answer	
Tuesday	History: the Weimar timeline (moved to Wednesday)		
Wednesday	Maths: ten trigonometry questions	Biology: read the respiration chapter	History: the Weimar timeline
Thursday	Chemistry: redo the three I got wrong		
Friday	Maths: last year's paper, section A (moved to Saturday)		
Saturday	English: write the question 5 answer	Biology: the four end of chapter questions	Maths: last year's paper, section A
Sunday	History: turn the timeline into ten cards		

WHAT GOT MISSED THIS WEEK

Tuesday's history, because my shift moved. Friday's maths, because I went out.

WHERE IT WENT INSTEAD

History went into Wednesday's spare. Maths went into Saturday's.

A SPARE I AM KEEPING FOR NEXT WEEK

Friday. Something always moves on a Friday and I keep pretending it will not.

Neither of the moved sessions was lost, and the week never had to be started again. That is the whole job the spare slot does.
